

PARTICIPATE IN A NEW ASTHMA STUDY

Do you or your child have asthma that is **uncontrolled**? This study will be testing a new investigational diagnostic device for measuring the level of inflammation in the lungs using a breath test called the FeNO test.

- Compensation for time spent at clinic visits, doing home testing, and travel will be provided.
- The 2 week long study involves only 2 required visits and 2 phone calls.
- The study will also be testing FeNO measurements twice a day at home.
- In this study, participants will receive asthma medications to improve your asthma.

Qualified Candidates Must:

- ★ Be age 5 or older.
- ★ **NOT** be taking any inhaled steroids.
- ★ During the week before the study, have asthma symptoms such as shortness of breath, coughing, wheezing, or difficulty exercising for at least 2 days.

**TO SEE IF YOU OR YOUR CHILD
QUALIFIES FOR THE STUDY, PLEASE
REACH OUT BY PHONE OR EMAIL.**
